

## Boom Lift Attachment

Boom Lift Attachments - Boom Lifts are a table lift piece of equipment which can be raised or lowered to differing heights, making this machine a functional instrument for certain manufacturing applications. There are many different variations of Boom Lift consisting of knuckle booms, scissor platform lifts, and aerial lifts, each operating in a different way.

Aerial hoists are most commonly utilized to carry people at snowboard lodges who are not comfortable with a ski lift. These lifts maneuver much like an elevator, skiers can be slowly but surely shuffled up the mountain, stopping at stations along the route until they reach the top. Aerial hoists are also utilized in construction, moving personnel safely up and down the sides of multi-level building sites.

Scissor lifts are quite often used by service businesses as the perfect method to securely permit personnel to repair and work on cables and wires attached to poles. Phone, cable television and power providers have relied on the proficiency of this type of boom jack for years.

Knuckle boom lift trucks are designed to be used in coarse terrain locales where the need to be able to change course is necessary. This style of boom can fit into many tight places that a scissor lift cannot. Working between numerous equipment in a production plant or in near proximity stuck between two walls, the knuckle boom additionally features a standard platform fitted with rails for security and employee safety.

The style of boom jack required by companies will sometimes depend on the nature of the work required. Luckily, there are suitable versions for just about any job.
