There are well over 220 Doosan service and sales locations operating in Canada and the United States. Additionally, there are more than 90 independent sellers moving lift truck supplies and materials handling equipment. This system helps Doosan Infracore America to aggressively compete in this competitive market. The forklift product line impressively includes 63 distinctive models consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these numerous vehicle designs vary from 3,000 to 33,000 lbs. All trucks are built in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest emerging forklift and lift truck company in the North American marketplace, due to its exceptional level of product performance and their consistently high level of buyer support and service given to all Doosan Infracore Forklift users. The U.S. lift Truck division situated in Cleveland has a skilled team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial home-based lift truck market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a national machinery expansion venture. Early product sales of this manufacturing equipment focused on large business communities, the armed services and on state-run companies. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical education became the new focus for enhancing quality and product development.

Daewoo began the first home-based lift truck business in 1967, and quickly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's sophisticated technological advancements combined with sales success placed them in a position of significant growth of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling industry. This endeavor radically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a new plant which helped launch the company for the manufacture of high added-value products suitable for export. In 1993, the corporation had a international sales system and started exporting designs they had established through in-house expertise, as an sovereign product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international markets.
