

## Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is an apparatus constructed out of high quality materials meant to be able to endure the most demanding operations and work environments. This piece of equipment could enable drivers to control the forks hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the arms or the entire load so as to facilitate much more exact carrying and placement in a quicker and more efficient manner.

The only one of its kind blade pocket design enables operators to be able to safely sway the unit's forks without any fear of destroying the positioning cylinders. This can allow the worker the alternative to either perform independent or simultaneous blade movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into fork positioners on existing units.
